Ancient High Beach Lines on Lake Tahoe,

The statement sometimes made that "Tahoe is an old volcanic crater" is not true. The region about the lake shows evidences of volcanic activity of various kinds, and the lake waters themselves have probably been dammed at times by outpourings of lava. A lava flow ap pears to have temporarily filled the out-let channel below Tahoe City, Cal. The lake, however, lies in a structural depression-a dropped block of the earth's

During the Neocene epoch and the carlier part of the Pleistocene epoch the waters of Lake Tahoe stood much higher than now, probably on account of lava dams which have since been cut through. Distinct beaches that mark former levels are found up to about 100 feet above the present lake, but it is believed that the waters formerly rose to still greater beights. At Tahoe City the most distinct of these old beaches is a terrace 35 to 40 feet above the level of the lake, and it is this terrace that makes the level ground on which Taboe Tavern is built .- (U.
